

OPTIMIZED

MVP

MOBILE CAR WASH SERVICE (CWS) APP

Fast and easy way to keep your
car clean **wherever you are**

Core Philosophy for Optimization

- Focus on features that directly enable booking and fulfilment
- Minimize costly integrations while maintaining essential functionality
- Prioritize revenue-generating capabilities
- Simplify user flows to reduce development time and cost.

Keep for MVP (Essential Features)

Customer App Essentials

1. **Basic Account Management**
 - Phone number registration with OTP only (defer email/social login)
 - Basic profile with single vehicle information
 - Single saved home address
2. **Streamlined Booking Flow**
 - Standard service packages
 - Custom service packages
 - Basic vehicle type selection
 - Location pin
 - Online payment option (no COD - cash on delivery)
 - Rate/Review vendors (star rating only with pre-set compliment/complaint options, no free text)
3. **Simple Status Updates**
 - SMS notifications for booking confirmation
 - Basic booking status updates via SMS
 - Vendor contact number shared post-booking

Vendor App Essentials

1. **Basic Vendor Management**
 - Simple registration with required documents
 - Basic profile management
 - Service area definition (static radius)
2. **Core Booking Operations**
 - Accept/reject bookings
 - SMS notifications for new bookings
 - Availability toggle (online/offline per service menu items)
 - Simple booking assignment to **on-road** wash units (share client info as "job cart")
3. **Essential Financial Features**
 - Basic earnings dashboard
 - Simple commission structure
 - Transaction history

Admin Panel Essentials

1. **Core Management**
 - Basic user management
 - Vendor approval process
 - Simple service package management (approval for custom packages).
 - Basic commission management (flat commission for all)
2. **Essential Monitoring**
 - Basic booking overview
 - Simple revenue dashboard
 - Basic user statistics

DEFER TO POST-MVP

COST-SAVING PRACTICES

SIMPLIFIED SERVICE-TRACKING

Defer for Post-MVP (Non-Essential Features)

Scope

1. Vendor Mobile App deferred to Phase II

Communication Strategy

2. Defer real-time tracking
3. Defer live monitoring of on-road car wash units by vendor admin

Cost Saving Practices

Communication Strategy

- Use SMS instead of real-time tracking
- Simple status updates rather than live monitoring
- **Share** vendor phone number instead of in-app chat

Technical Simplifications

- Static service areas instead of dynamic radius calculations
- Basic availability management instead of **complex scheduling**
- Simple pricing model instead of dynamic pricing

Development Approach

- Implement basic versions of features first
- Minimize third-party integrations
- Focus on essential APIs

Simplified Tracking to without Complex Infrastructure

Status-Based Location Updates:

Instead of continuous real-time tracking, proposed to implement status-based updates with estimated arrival times.

Vendor Admin will update **booking status & location** at key moments: e.g

- When accepting the booking for example:
- When starting the journey, When near the location (2-3 mins away)

Example:

- Send "preparation notifications" 15 minutes before provider starts moving
- "Your provider is on the way (arriving at 00:00 ~ 00:20)" – fixed time 20 mins for all journeys.
- "Arriving soon" – 3 mins away
- "Service in progress (Est. 45 mins remaining)"

MVP: Customer Features

CWS APP

Fast and easy way to keep your car clean **wherever you are**

How it works: for easier experience, customers will be able to book standard packages at fixed pricing. Experienced customers can view more vendor packages and promotions provided by each vendor. Vendors can indicate availability to provide standard and custom packages as they please.

1. **User Account Management**
 - Sign up with phone number (OTP)
 - Profile creation and management
 - Saved vehicles (input vehicle details type, color, plate #)
 - Saved Address
 - Language settings, Order history
2. **Booking Experience**
 - Choose geographical area
 - OTP or WhatsApp verification
 - Enter profile details (name, email + agree on terms)
 - Add vehicle information (type) + save car name + option to add vehicle photo
 - Select package (pre-set prices) - (Quick wash, Shine wash, Detail wash) as **Standard service packages** SSP¹
 - Option to add vehicle photo before confirming (to avoid hassle)
 - Pin address on map + add address details (home/work) (building, apartment, floor, street, additional directions)
 - Choose time (**Now**) vs. (**Schedule**) (When do you want this?) + display location for confirmation
 - See confirmation page with all details + price
 - Get auto-assigned vendor and confirmation page shows service tracking and estimated arrival time.
 - Payment deducted

Service Route II: Custom Packages

 - **Need other services?** View list of vendors
 - View services offered/pricing
 - View description and additional info
 - Select custom package.
 - Add special requests/notes in booking
 - View estimated time of arrival for service
 - Cancel orders (limited to a max time of 5 minutes from the time of booking).
3. **Location and Tracking**
 - Location address pinning
 - Get updates from vendors on booking status (defer real-time location tracking in MVP)
4. **Payment and Transactions**
 - Local cards (Qatar), Visa credit cards, Google/Apple Pay)
 - Consent to storage and future use of card data.
 - Secure payment processing ([SkipCash](#), [MyFatoorah](#) or [QNB](#) Payment gateway integration)
 - View itemized receipts and order history
5. **Communication**
 - Grant permission for "Push notifications"
 - SMS
6. **Ratings and Reviews**
 - Rate and review service after completion
 - View vendor ratings and reviews
 - Filter vendors per rating (Highest rated)
7. **Support and Help**
 - Emergency contact options

¹ When customers book non-custom packages, the app should prioritize vendors who are (a) highly rated, (b) available, (c) within the same city as the customer (instead of live location updates, a simple city match, or radius defined by vendor could be used).

MVP - Vendor Admin Features

(Web Portal)

1. Account Management (Become a Partner)

- Business profile creation and management with valid email and phone number.
- Complete the online registration process and submit registration documents²

2. Service Management

- Add and manage availability of **standard service packages** (SSP)³.
- Add and manage availability of **custom service packages** (CSP) and add (a) service description and any additional information (e.g. duration, power outlet requirement, water source requirement).
- Set names + pricing (for CSPs only)
- Edit prices and introduce promotions for custom packages only.
- Setup operating hours and availability settings
- Service area definition (choose from predefined location list, or setup statis radius)

3. Booking Management

- Real-time booking notifications
- **Accept or decline** booking requests
- ~~View daily, weekly, and monthly schedules~~
- Manage capacity and availability (in case vendor has multiple on-road units that can perform multiple bookings at the same time)
- Monitor service status of on-road service units
- **Toggle on/off** to pause service orders or indicate **Busy** status to let customers know to expect longer wait times.

4. Mobile Units Tracking

- In case of multiple units (fleet) Vendor admin can assign requests to vehicles.
- Complete quality control checklist + images upon service completion; this will be used for vendors QA by admin, (e.g. *Vendors will not be paid commission unless service is complete*)

5. Communication

- Get notified on dashboard of new bookings (**now** or **scheduled**)
- Push notifications/SMS for new bookings and updates

6. Payment Processing

- See their payment gateway account through the dashboard (requires integration)
- Secure payment collection (automated by the payment gateway)
- View earnings and transaction history

7. Performance Metrics

- Analytics dashboard (bookings, earnings, commission deductions)
- View ratings and reviews

8. Support and Training

- In-app support for technical issues

9. User Management

- Update vendor admin details
- Add users for fleet in case of multiple mobile wash units

² Vendors will be asked to provide a copy of the following documents to be verified and validated:

Trade license, Commercial Registration, Trademark (if applicable), Qatar ID, Power of Attorney (if applicable), Bank Certificate, Email declaration signed and stamped, Proof of payment for the registration fee, Logo, Cover Photo

³ All vendors will be required to indicate availability to provide SSPs (Standard Service Packages), vendors can toggle select one or all packages, vendors can select unavailable for SSPs and will not be automatically selected by the app algorithm. Standard packages are: Wash, Shine, Detail

Revamped/MVP:

Vendor On-Road Service Unit(s) Features

Service Bookings:

- Be notified of assigned bookings by Vendor Admin
e.g. Get SMS or email when new service request is assigned to on-road car wash unit

Communication:

- Upon successful booking, phone number of mobile units is shared with customer.
Replaces the in-app messaging
(Replaces the vendor-on-road unit updates).

Updated:

Admin Features

1. User Management

- Manage customer accounts
- Approve and manage vendor accounts
- User roles and permissions

2. Service Management

- Define standard service package (SSP) categories for all vendors.
- Approve and manage service packages (SSP and CSP details)
- Set commission rates (for Card and COD options)⁴
- Approve (CSP) packages per vendor

3. Booking Oversight

- View all current and past bookings
- Resolve booking disputes
- Manage cancellations and refunds

4. Financial Management

- Overall revenue dashboard (per vendor too)
- Commission tracking
- Approving vendor bank information

5. Content Management

- Manage app content (FAQs, Terms of Service, etc.)
- Push notification management
- Approve Promotional campaign creation (of Vendors Custom Service Packages)

6. Analytics and Reporting

- Comprehensive analytics dashboard
- Filter analytics per app variables (e.g. booking type, vendor)
- Generate custom reports (usage, revenue, user acquisition)
- Export data

7. App Configuration

- Manage app settings and parameters
- Control feature toggles (where applicable)
- Manage third-party integrations (maps, payment gateways)

8. Quality Control

- Monitor vendor ratings and performance (moderate customer reviews and approve them⁵)
- Set and enforce service standards (e.g. service completion checklist to be completed by vendor mobile units)

Additional Key Admin User Management Features

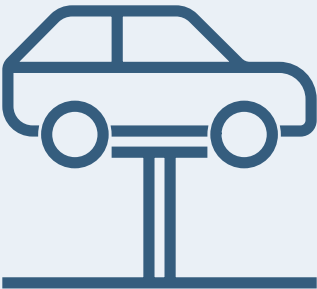

1. **User Overview Dashboard** (including real-time user statistics, e.g. New Users, Total Vendors, New Vendor Registrations. Etc)
2. **Communication Tools** (including mass communication features to all users, push-notifications)

⁴ In COD, the app will apply commission rate on services paid for in cash and show it debited in vendor admin accounts. Commission rates will apply to digital payments automatically.

⁵ Customers do not need to be informed that their reviews are being moderated.

General App Features

- 1. **Multilanguage Support**
 - Arabic and English language options
- 2. **Offline Mode**
 - Basic functionality and data caching when offline
- 3. **Performance Optimization**
 - Fast load times and smooth transitions
- 4. **Security**
 - End-to-end encryption for messages and payments
 - Regular security audits and updates
- 5. **Integration Capabilities**
 - Open APIs for potential future integrations
- 6. **Accessibility**
 - Design considerations for users with disabilities
- 7. **Data Backup and Recovery**
 - Regular automated backups
 - Disaster recovery plan
